BlackBerry
Description of the service

The BlackBerry communicator allows you to access the up-to-date information you need for your everyday business activities even when out of the office. Thanks to the BlackBerry service, you have access not only to your corporate e-mail and calendar but also to the Internet, intranet and to the corporate directory.

Main advantages and benefits:
- instant receipt of e-mails without the need for synchronization – so-called Push e-mail;
- highly-secured communication via 3DES encryption;
- possibility of opening attached documents in the following formats: Word, Excel, PowerPoint, Adobe PDF, image files;
- on-line access to all corporate contacts
- display of updated appointments noted in the calendar
- easy use of the terminal and easy typing of messages thanks to the integrated keyboard
- possibility of recording other applications on the device, for example
  http://www.blackberry.com/ThirdParty
- comprehensive tailor-made solution
- service standard for international customers of T-Mobile

Email client

As soon as you receive a new e-mail in your inbox (MS Outlook or Lotus Notes), a copy is sent to the BlackBerry mobile device which alerts you by tone or vibration. You can then open the e-mail in your inbox, forward it, delete it or send a reply. E-mails including attachments can be viewed in the following formats: Word, Excel, PowerPoint, Adobe PDF, and image files.

Mobile calendar

In addition to instant e-mail communication, you also have up-to-date access to your notes in the calendar. With BlackBerry, you can plan new meetings and accept or reject newly accepted meetings. Any changes will be reflected immediately in your corporate calendar application.
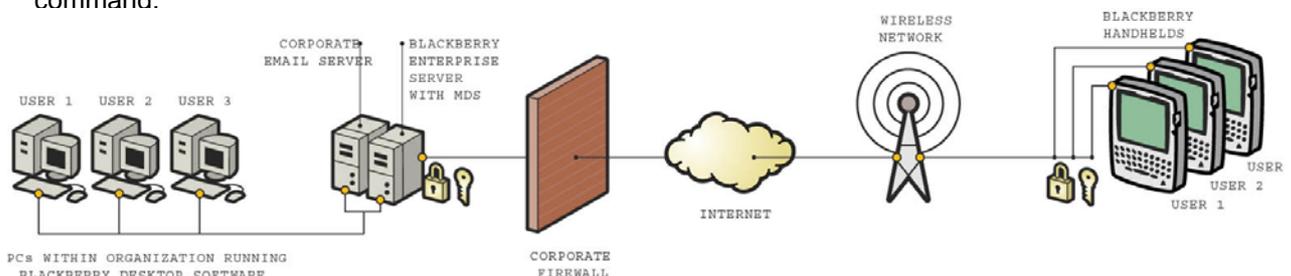

Corporate contacts

Another, no less important feature is access to the global directory on your mail server where the following information can be stored: surname, name, phone, fax, mobile phone, position, e-mail address, postal address, etc. Users do not have to store contact data in the local memory, and have access to up-to-date information at any time; moreover, they have access to all contact data, which may number over one thousand contacts in some companies.

Web explorer

Internet access is commonplace nowadays and BlackBerry will provide you with that possibility.

Security

Communication between the BlackBerry mobile device and the server is strongly secured by using 3DES/AES encryption. The service administrator can also define further security elements that will increase security, thus preventing leakage of sensitive information from the company. One of these elements is the possibility of remotely wiping all data from the device: in the event that the mobile device is lost or stolen, the IT administrator can delete all information stored in the device using a simple command.

Service support
The installation and set-up of BlackBerry Enterprise Server (BES) will be ensured by T-Mobile Czech Republic a.s. through a trained data service partner.
